Cybersecurity

Reimagine risk and unlock opportunities through a human-led, tech-powered approach

Cyber attacks on companies are becoming increasingly frequent and sophisticated. Now more than ever, cyber risks need to be managed in order to protect your company against digital hazards and boost your cyber resilience. The independent research company Forrester Wave™ has singled out PwC as one of the leading cyber security consultants in Europe. Together with AWS' secure-by-design cloud solutions, our dedicated cybersecurity, privacy, and forensics practice can help clients natively embed security and compliance capabilities across the full scope of their cloud transformation journey.

PwC's Cybersecurity and Privacy Service Offerings

PwC's global team of practitioners includes specialized consultants, former law enforcement agents, cyber forensic investigators, intelligence analysts, technologists, attorneys, and industry leaders in cybersecurity and privacy. The practice is made up of over 5000 dedicated professionals worldwide. Analysts consistently rank PwC a leader in cybersecurity and privacy consulting services. PwC has 500+ certifications and is currently the only partner with all 4 AWS Security Competencies. Furthermore, we are an AWS Level 1 MSSP Competency Launch Partner.

→ Cloud Security

Development and implementation of **Cloud Security** Strategy, which takes the cybersecurity aspects as well as Well Architected Framework throughout the lifecycle of the company's cloud systems into consideration.

Cyber Resilience

Embedding the security aspects into the cloud workloads to increase the security posture and reducing the risk of exposure (e.g. vulnerability management, logging & monitoring, automated threat detection).

Identity & Access Management

Establishment of processes and the supporting tools in a top-down approach, focusing on application and enduser accounts first and working down to DB, OS and other layers.

SOC Integration

Integration of the cloud workloads to the Security **Operation Center** (SOC) including implementation of relevant AWS security services as well as definition of use cases, playbooks, log sources, etc.

Incident Response

Support during root cause analysis. investigation, incident triage, post breach remediation and service restoration as well as conduction of lessons learned to ensure an effective damage control in the event of an emergency in the future.

We are here to help
